Grading

COMP 4704

Grading

- Now that we are halfway through the quarter, we would like to describe how your grades will be determined
  - Reviews: 25%
  - Presentations: 25%
  - Coding of DUP (filters, dupd, CUDA) : 40%
  - Individual DUP demo: 10%

- For presentations and reviews, we will start grading with the October 21 papers
  - There are (will be) 10 papers after this point
  - 2 more presentations
  - 8 more reviews

Reviews (25%)

- **25% - concise, precise summary of main points**
  - 200 words MAX (we're not kidding)
  - main points of the paper MUST BE expressed clearly and in your own words

- **75% - critical evaluation**
  - some substantive reason of why the paper should be rejected
  - some major improvements that could be made to the work

Presentations (25%)

- As a blanket statement, the presentations need to improve significantly from where they have been

- We are looking for you to put some thought into how to convey the main ideas of the paper in your OWN WORDS, with your OWN EXAMPLES

- There is a presentation grading rubric available on the website

DUP Coding (40%)

- **If you have been doing group work, we will ask the group to estimate the fraction each member contributed to a portion of the tools**

- **Remember, this course satisfies the programming requirement:**
  - **We are looking for some significant effort**

Individual DUP Demos (10%)

- Do something cool with the software that has been written
